Notes on Equation (7).

$$|D\Phi(x)| \le \frac{C}{|x|^{n-1}}, \quad |D^2\Phi(x)| \le \frac{C}{|x|^n} \quad (x \ne 0)$$

for some constant $C > 0$.

In fact,

$$\frac{\partial}{\partial x_i}\Phi(x) = -\frac{1}{n\alpha(n)}x_i|x|^{-n},$$

$$\frac{\partial^2}{\partial x_i \partial x_j}\Phi(x) = \frac{1}{n\alpha(n)}(nx_ix_j - |x|^2\delta_{ij})|x|^{-n-2}.$$

Problem 2.1. *Write down an explicit formula for a function u solving the initial-value problem*

$$\begin{cases} u_t + b \cdot Du + cu &= 0 \ in \ \mathbb{R}^n \times (0, \infty) \\ u &= g \ on \ \mathbb{R}^n \times \{t = 0\}. \end{cases}$$

Here $c \in \mathbb{R}$ and $b \in \mathbb{R}^n$ are constants.

Proof (Transport equation). Define

$$z(s) = u(x + sb, t + s) \ (s \in \mathbb{R}).$$

So

$$\begin{aligned} \dot{z}(s) &= Du(x + sb, t + s) \cdot b + u_t(x + sb, t + s) \\ &= -cu(x + sb, t + s) \\ &= -cz(s). \end{aligned}$$

Solve this ODE to get

$$\begin{aligned} z(s) = z(0)e^{-cs} &\Longrightarrow u(x + sb, t + s) = u(x, t)e^{-cs} \\ &\Longrightarrow u(x - tb, 0) = u(x, t)e^{ct} \qquad \text{(Let } s = -t) \\ &\Longrightarrow g(x - tb) = u(x, t)e^{ct} \\ &\Longrightarrow u(x, t) = g(x - tb)e^{-ct}. \end{aligned}$$

□

Problem 2.2. *Prove that Laplace's equation $\Delta u = 0$ is rotation invariant; that is, if O is an orthogonal $n \times n$ matrix and we define*

$$v(x) := u(Ox) \ (x \in \mathbb{R}^n),$$

then $\Delta v = 0$.

Proof.

(1) Let $O = [O_{ij}]$. O is orthogonal if $OO^t = O^t O = I$, or

$$\sum_{i=1}^{n} O_{pi} O_{qi} = \delta_{pq}$$

where δ_{pq} is the Kronecker delta.

(2) Let $y = Ox$. So that

$$D_i v(x) = \sum_{p=1}^{n} D_p u(y) O_{pi},$$

$$D_{ij} v(x) = \sum_{q=1}^{n} \sum_{p=1}^{n} D_{pq} u(y) O_{pi} O_{qj},$$

$$\Delta v(x) = \sum_{i=1}^{n} D_{ii} v(x)$$

$$= \sum_{i=1}^{n} \sum_{q=1}^{n} \sum_{p=1}^{n} D_{pq} u(y) O_{pi} O_{qi}$$

$$= \sum_{q=1}^{n} \sum_{p=1}^{n} D_{pq} u(y) \left(\sum_{i=1}^{n} O_{pi} O_{qi} \right)$$

$$= \sum_{q=1}^{n} \sum_{p=1}^{n} D_{pq} \delta_{pq}$$

$$= \sum_{q=1}^{n} D_{qq} u(y)$$

$$= \Delta u(y).$$

(3) As $\Delta u(y) = 0$, $\Delta v(x) = 0$.
